

# How To: Download a MicroBIGG-E table > 100,000 rows (all CARBAPENEM genes found in Pathogen Detection isolate assemblies)

NCBI Pathogen Detection

<https://www.ncbi.nlm.nih.gov/pathogens>

U.S. National Library of Medicine  
National Center for Biotechnology Information

# At a glance

- Use MicroBIGG-E  
<https://www.ncbi.nlm.nih.gov/pathogens/microbigge>
- Use filters or search to select rows of interest, in this case subclass:CARBAPENEM
- Subdivide the search into sets with  $< 100,000$  rows to download in batches
  - Use filters to get results under 100,000 rows
  - Download one file
  - Change filters to get different results under 100,000 rows
  - Download second file
  - Repeat above steps as needed to get the entire set

# Pathogen Detection BETA

To assist the National Database of Antibiotic Resistant Organisms (NDARO), NCBI Pathogen Detection identifies the antimicrobial resistance, stress response, and virulence genes found in bacterial genomic sequences. This enables scientists to track the spread of resistance genes and to understand the relationships between antimicrobial resistance and virulence.

NCBI Pathogen Detection integrates bacterial pathogen genomic sequences originating in food, environmental sources, and patients. It quickly clusters and identifies related sequences to uncover potential food contamination sources, helping public health scientists investigate foodborne disease outbreaks.

There has been a change to the *Isolation type / epi\_type* attribute that affects *min-same/min-diff* computation. Now where an isolate has no information to support the setting *environmental/other* the Browser will no longer default to that value but instead present as *NULL*. This means that the *min-same/min-diff* values for this isolate will present as *n/a*, and other *min-same/min-diff* values for isolates clustered with this isolate may change. Please see the [Help](#) text for more details.

The screenshot shows the NCBI Pathogen Microbigge interface. On the left, the 'Available filters' panel is visible, with 'Subclass' selected. The main area shows a search for 'CARBA' with a table of results. The table has two columns: 'Subclass' and 'Count'. The 'CARBAPENEM' subclass is selected and highlighted, showing a count of 107627. A 'Filters 1' indicator is present at the top right of the main area.

Subclass	Count
